

Enduring sharpness

Instruments for ENT and neurosurgery

The brilliant cutting properties of our rotary instruments for ENT and neurosurgery unleash a wide range of applications. All instruments of the comprehensive KOMET range – from round burs to diamond instruments – are kind on the power system and can be reprocessed according to a validated method. Free of nicks and burrs, the ultra-precise blades of the KOMET instruments rotate with perfect concentricity and lend these instruments a durability that is second to none!

Advantages at a glance:

- reprocessable according to a validated method
- long useful life
- suitable for ENT and neurosurgery
- compatible with all commonly used power systems
